

THE CLAIMS

1. (Currently amended) A system providing search functionality to support the exchange and consumption of media among a group of users and administered by a member of the group of users, the system comprising:

a first television display in a first home;

a first storage in the first home that stores the media; the first storage supporting consumption of the media by the first television display, and having ~~an-associated~~ a first network protocol address associated with a first user;

a second television display in a second home;

a second storage supporting consumption of the media by the second television display in the second home, and having ~~an-associated~~ a second network protocol address associated with a second user; and

search software that receives a request comprising user defined search criteria and one of the first and second associated network protocol addresses, the first and second associated network protocol addresses representing members of a ~~pre-defined~~ self-administered group of users, where the ~~predefined~~ self-administered group of users is defined based on authorization by the member of the group of the users ~~a user of the members~~, and responds by identifying media currently stored on at least one of the first and second storage, the identified media matching the user defined search criteria.

2. (Previously presented) The system of claim 1 wherein the media comprises one or more of audio, a still image, video, and/or data.

3. (Previously presented) The system of claim 1 wherein the first and second network protocol addresses are one of an Internet protocol (IP) address, a media access control (MAC) address, or an electronic serial number (ESN).

4. (Previously presented) The system of claim 1 wherein the first storage and second storage communicatively couple via a communication network that comprises one or more of a cable infrastructure, a satellite network infrastructure, a digital subscriber line (DSL) infrastructure, an Internet infrastructure, an intranet infrastructure, a wired infrastructure, and/or a wireless infrastructure.

5. (Original) The system of claim 4 wherein the communication network is the Internet.

6. (Previously presented) The system of claim 1 wherein consumption comprises one or more of playing digitized audio, displaying a still image, displaying video, and/or displaying data.

7. (Previously presented) The system of claim 1 wherein the user defined search criteria comprises one or more of a time period, a device type, a specific media, a media type, a specific media channel, and/or a media channel type.

8. (Original) The system of claim 1 further comprising: at least one media peripheral communicatively coupled to the first storage, the at least one media peripheral having storage; and the search software responding by identifying media stored on the at least one media peripheral, the identified media matching the user defined search criteria.

9. (Previously presented) The system of claim 8 wherein the at least one media peripheral comprises one or more of a digital camera, a digital camcorder, a television, a personal computer, a CD player, a home juke-box, a multi-media gateway device, a multi-media personal digital assistant, a DVD player, a tape player, and/or a MP3 player.

10. (Original) The system of claim 1 further comprising: at least one server for storing media, the at least one server having been designated by a user for searching; and the search software responding by identifying media stored on the at least one server, the identified media matching the user defined search criteria.

11. (Previously presented) The system of claim 10 wherein the at least one server comprises one or more of a 3rd party media provider, a media peripheral, a personal computer, a 3rd party storage vendor, and/or a broadband head end.

12. (Currently amended) A system providing search functionality supporting the exchange and consumption of media among a group of user administered by a member of the group of users, the system comprising:

a first storage for storing media, in a first home, and having a first ~~asseeiated~~ protocol address associated with a first user;

a second storage for storing media, in a second home, and having a second ~~asseeiated~~ protocol address associated with a second user;

set top box circuitry, in the first home, communicatively coupled to support searching of storage at the first and second associated protocol addresses; and

search software that receives a request comprising user defined search criteria and one of the first and second associated protocol addresses, the first and second associated protocol addresses representing members of a ~~pre-defined~~ self-administered group of users, where the ~~pre-defined~~ self-administered group of users is defined based on authorization by the member of the group of users ~~a user of the members~~, and responds by identifying ~~the other of the first and second associated proteool addresses and the~~ media currently available at one or both of the first and second associated protocol addresses, the identified media matching the user defined search criteria.

13. (Previously presented) The system of claim 12 wherein the media comprises one or more of audio, a still image, video, and/or data.

14. (Previously presented) The system of claim 12 wherein the first and second protocol addresses are one of an Internet protocol (IP) address, a media access control (MAC) address, or an electronic serial number (ESN).

15. (Previously presented) The system of claim 12 wherein the set top box circuitry and the second storage communicatively couple via a communication network that comprises one or more of a cable infrastructure, a satellite network infrastructure, a digital subscriber line (DSL) infrastructure, an Internet infrastructure, an intranet infrastructure, a wired infrastructure, and/or a wireless infrastructure.

16. (Original) The system of claim 15 wherein the communication network is the Internet.

17. (Previously presented) The system of claim 12 wherein consumption comprises one or more of playing digitized audio, displaying a still image, displaying video, and/or displaying data.

18. (Previously presented) The system of claim 12 wherein the user defined search criteria comprises one or more of a time period, a device type, a specific media, a media type, a specific media channel, and/or a media channel type.

19. (Original) The system of claim 12 further comprising: at least one media peripheral communicatively coupled to the first storage, the at least one media peripheral having storage; and the search software responding by identifying media stored on the at least one media peripheral, the identified media matching the user defined search criteria.

20. (Previously presented) The system of claim 19 wherein the at least one media peripheral comprises one or more of a digital camera, a digital camcorder, a television, a

personal computer, a CD player, a home juke-box, a multi-media gateway device, a multi-media personal digital assistant, a DVD player, a tape player, and/or a MP3 player.

21. (Original) The system of claim 12 further comprising: at least one server for storing media, the at least one server having been designated by a user for searching; and the search software responding by identifying media stored on the at least one server, the identified media matching the user defined search criteria.

22. (Previously presented) The system of claim 21 wherein the at least one server comprises one or more of a 3rd party media provider, a media peripheral, a personal computer, a 3rd party storage vendor, and/or a broadband head end.

23. (Currently amended) A system providing search functionality supporting the exchange and consumption of media among a group of users administered by a member of the group of users, the system comprising:

a first storage for storing media at a first home of a first user, the first user being one of a pre-defined self-administered group of users, where the predefined self-administered group of users is defined based on authorization by the member of the group of users a user of the members;

a second storage for storing media at a second home of a second user, the second user being one of the pre-defined self-administered group of users;

set top box circuitry, in at least one of the first and second homes, the set top box circuitry communicatively coupled to support the identification of media currently available to

the pre-defined self-administered group of users; and search software that receives user defined search criteria and that responds by identifying media currently available within the pre-defined self-administered group of users, the identified media matching the user defined search criteria.

24. (Previously presented) The system of claim 23 wherein the media comprises one or more of audio, a still image, video, and/or data.

25. (Previously presented) The system of claim 23 wherein the user defined search criteria comprises one or more of a time period, a device type, a specific media, a media type, a specific media channel, and/or a media channel type.

26. (Original) The system of claim 23 further comprising: at least one media peripheral communicatively coupled to the first storage, the at least one media peripheral having storage; and the search software responding by identifying media stored on the at least one media peripheral, the identified media matching the user defined search criteria.

27. (Previously presented) The system of claim 26 wherein the at least one media peripheral comprises one or more of a digital camera, a digital camcorder, a television, a personal computer, a CD player, a home juke-box, a multi-media gateway device, a multi-media personal digital assistant, a DVD player, a tape player, and/or a MP3 player.

28. (Currently amended) A system providing search functionality supporting the exchange and consumption of media among a group of users administered by a member of the group of users, the system comprising:

set top box circuitry, in at least one of first and second homes, the set top box circuitry communicatively coupled to support the identification of media currently available to members of a ~~pre-defined~~ self-administered group of users, where the ~~pre-defined~~ self-administered group is defined based on authorization by the member of the group of users ~~a user of the members;~~ and

search software that receives user defined search criteria and that responds by identifying the media currently available within the ~~pre-defined~~ self-administered group of users, the identified media matching the user defined search criteria.

29. (Previously presented) The system of claim 28 wherein the media comprises one or more of audio, a still image, video, and/or data.

30. (Previously presented) The system of claim 28 wherein the user defined search criteria comprises one or more of a time period, a device type, a specific media, a media type, a specific media channel, and/or a media channel type.

31. (Previously presented) The system of claim 28 wherein at least one media peripheral is communicatively coupled to a first storage in the first home, the at least one media peripheral having storage; and the search software responding by identifying media stored on the at least one media peripheral, the identified media matching the user defined search criteria.

32. (Previously presented) The system of claim 31 wherein the at least one media peripheral comprises one or more of a digital camera, a digital camcorder, a television, a personal computer, a CD player, a home juke-box, a multi-media gateway device, a multi-media personal digital assistant, a DVD player, a tape player, and/or a MP3 player.
